

CORE STACK

FRONTEND

React, Next.js (App Router), TypeScript, Redux Toolkit, TanStack Query, Tailwind, Ant Design, Vite, React Native

BACKEND & DATA

Node.js, Express, PostgreSQL, Prisma, Python, REST API design, Sanity CMS, auth & payments (OAuth, Monri)

GEOSPATIAL

Mapbox GL JS, OpenLayers, Leaflet, GeoJSON, WMS/WFS, tile servers, Potree.js (LiDAR point clouds)

IOT & REALTIME

Sensor telemetry interfaces, live device monitoring, real-time dashboards and map-based operational views

AI ENGINEERING

Anthropic API in production, Claude Code multi-agent workflows, MCP integrations, context engineering, AI-assisted review

PLATFORM

Docker, Git / GitLab / GitHub, CI pipelines, Figma, GTM, i18n (next-intl)

STRENGTHS

- Map-heavy, data-dense UIs
- IoT & real-time dashboards
- Legacy-to-modern migrations
- Frontend architecture at scale
- Mentoring & code review

EDUCATION

01/2018
BSc, Information Technology Engineering
Pan-European University “APEIRON”, Banja Luka

LANGUAGES

Serbian — native
English — professional working proficiency

STEFAN VRANJEŠ

Software Engineer · Frontend-Focused, Full-Stack & AI-Assisted Delivery

+387 65 331 962 stefan.vranjes995@outlook.com Banja Luka, BiH

Portfolio: stefanwebdev.com

PROFILE

Software engineer with **8+ years at Planet Soft**, where I went from intern, to full-stack developer (Python, jQuery), to frontend specialist, to **Frontend Team Lead** of a 10-person frontend and mobile team. I build products end to end: React and Next.js with TypeScript on the front, Node.js/Express with PostgreSQL and Prisma on the back, and I am comfortable owning the API contract rather than waiting for it. My specialty is **map-heavy, data-dense interfaces** — GIS platforms, spatial analysis tooling and LiDAR point-cloud visualization used in production for utility and forestry management. I also build and run **AI-assisted development workflows**, from a multi-agent Claude Code setup for scaffolding, review and translation, to shipping features on the Anthropic API. I like modernizing what is stale, mentoring people, and shipping things that hold up in production.

EXPERIENCE

10/2023 – Present

Frontend Team Lead

Planet Soft | Banja Luka

- Lead a cross-functional team of 10 frontend and mobile (React Native) developers across GIS and SaaS products.
- Own frontend architecture across the product portfolio: shared component library, state and folder conventions, reusable data-fetching and auth layers.
- Drove migration from legacy jQuery and class-based React to Vite, TypeScript, Redux Toolkit and TanStack Query — cutting build times and onboarding effort.
- Introduced AI-assisted development to the team: Claude Code agents for scaffolding, review and i18n translation, with project context files (*CLAUDE.md*, *PLAN.md*) as a team standard.
- Run code reviews, mentor junior developers and lead internal knowledge-sharing sessions.
- Work directly with design, backend and QA to deliver scalable SaaS and GaaS platforms.

12/2017 – Present

Software Engineer

Planet Soft | Banja Luka

- Built a GaaS platform with spatial analysis tooling and a dynamic form engine used for utility and forestry management.
- Delivered a LiDAR point-cloud visualization interface, integrating Potree.js with Mapbox for large geospatial datasets.
- Created interactive dashboards and charting for environmental data analysis.
- Implemented authentication, dynamic tables and form systems with React Hooks and Redux Toolkit.
- Contributed across the stack in earlier years (Python, jQuery), and migrated development environments from VMs to local Docker setups.
- Shaped app layout and UX/UI alongside designers; worked in Scrum throughout.

SELECTED PROJECTS

FK Borac Ticketing System — React, TypeScript, React Hook Form, Monri | karte.fkborac.net
Online ticket sales platform covering match listings, stand and seat selection, and a full checkout flow with Monri payment gateway integration for secure card payments.

Web GIS Platforms — React, Mapbox, OpenLayers, Redux · multiple client deployments
Long-running line of GIS work across utility, forestry and infrastructure clients — Beogradske Elektrane and Srbija Šume among them — covering real-time data visualization, spatial analysis and advanced mapping for large-scale operations.

EMS LiDAR — Potree.js, Mapbox, TypeScript, TanStack
LiDAR processing and visualization system giving engineering teams 3D geospatial analysis and interactive mapping for environmental and infrastructure projects.

Smart Waste Management — IoT · React, Mapbox, real-time sensor data
IoT platform for waste collection: live container fill-level monitoring on a map, sensor telemetry and operational dashboards for field teams.

Fluxer — IoT · React, TypeScript, device telemetry
IoT monitoring interface for connected devices, with live measurement streams, historical charting and device management.

PROFESSIONAL DEVELOPMENT

- AmCham Young Professionals, Slovenia (2025) & AmCham YOUNg Mentor programme (2026/27)
- React Summit & JavaScript Conference — Amsterdam (2023)
- WeAreDevelopers — Berlin (2022)
- Script'19 Conference — Linz, Austria
- Web Security — Frontend Masters (Steve Kinney)
- UX/UI Design Course (2020)
